

İÇDAŞ Environmental Policy

As a model enterprise, our company is committed to serving both our employees and the local community by ensuring a healthy and clean environment—both today and for the future. Through an innovative management culture and the use of up-to-date, scientific, efficient, and effective work methods, we prioritize environmental management, occupational safety, and quality, and continuously strive to improve environmental performance. We adopt the following principles to achieve these goals:

- Ensuring the reduction of waste at source, evaluating wastes with recycling/recovery value based on the conservation of natural resources and sustainable environmental thinking, and disposing of hazardous wastes in a way that does not harm the environment,
- Establishing measurable environmental performance indicators, monitoring them regularly, and pursuing continuous improvement,
- Promoting the recovery of wastewater (domestic, process, and rainwater) through the application of suitable processes and technologies,
- Taking actions to prevent waste generation, increase reuse and recycling rates within the scope of zero waste and circular economy principles,
- Ensuring that economic decisions and ecological decisions are considered together, and providing environmental impact assessment in order to continually improve our position in the sector,
- Reducing water, energy, raw material, and chemical consumption by using applicable best production practices and clean production technologies, and using natural resources efficiently,
- Contributing to sustainability by following environmental innovations and developments,

İçdaş Çevre Politikası

- Assessing risks and opportunities related to climate change, engaging in activities related to the climate crisis and transitioning to a low-carbon economy,
- Performing emission and ambient air quality controls to prevent air pollution,
- Creating awareness about biodiversity, contributing to the protection of biodiversity in the region where we operate, supporting projects aimed at conservation or enhancement, and evaluating the impact of our investments on biodiversity,
- Implementing the ISO 14001 Environmental Management System and being a leader in environmental management system practices,
- Fulfilling the requirements of national laws and regulations as well as international agreements in full..

Our core policy is to leave behind a better quality of life and a cleaner, more livable environment for future generations. We commit to continuously working in line with our environmental policies stated above to leave a cleaner and more liveable world for future generations and declare it to the public.
